445 12th Street, SW
Washington, DC 20554

The Honorable Michael O'Rielly
FCC Commissioner
Federal Communications Commission
445 12th Street, SW
Washington, DC 20554

Re: Expanding the Economic and Innovation Opportunities of Spectrum Through Incentive Auctions, GN Docket No. 12-268; Amendment of Part 15 of the Commission's Rules for Unlicensed Operations in the Television Bands, Repurposed 600 MHz Band, 600 MHz Guard Bands and Duplex Gap, and Channel 37, ET Docket No. 14-165; Amendment of Parts 15, 73 and 74 of the Commission's Rules to Provide for the Preservation of One Vacant Channel in the UHF Television Band for Use by White Space Devices and Wireless Microphones, MB Docket No. 15-146; Amendment of Part 15 of the Commission's Rules for Unlicensed White Space Devices, ET Docket No. 16-56

Dear Chairman Pai, Commissioner Clyburn and Commissioner O'Rielly:

As members of the House Rural Broadband Caucus as well as members interested in decreasing the digital divide, we have dedicated ourselves to ensuring that rural communities enjoy the same access to services and opportunities enabled by broadband internet that are so often taken for granted in urban and suburban communities. We would never fathom a rural resident or business relocating to enjoy plumbing or electricity, but too many of our constituents face just that choice when it comes to the modern equivalent: accessing broadband and the internet.

We are writing because we believe a solution could well be at hand, one that could be realized with significant private sector support and minimal infrastructure investment. Specifically, we are urging the Commission to preserve at least three, 6 MHz television white spaces channels in every media market across the United States in order to promote access to affordable broadband internet, particularly in rural and underserved areas.

According to the FCC's 2016 Broadband Progress Report, approximately 34 million Americans do not have broadband internet access. Of these, about 24 million live in rural communities that lack the network infrastructure necessary to provide a reliable and affordable broadband connection. This means students, farmers, doctors, law enforcement officials, and families across rural America are unable to

access the internet and, consequently, are being denied the economic, health, and public safety advances enabled by that access.

The effects of this disparity are clear for struggling communities. According to a recent Wall Street Journal article, researchers at universities in Texas, Mississippi and Oklahoma found that rural counties with access to broadband correlated to higher incomes and lower unemployment. One in ten Americans is left behind without access to technological opportunities readily available in other parts of the country. Respectfully, we believe it's time for the FCC to take concrete steps to make affordable broadband internet, and the opportunities that come with it, available to *all* Americans.

We believe that the television white spaces (TVWS) have strong potential to revolutionize broadband internet accessibility in rural areas. TVWS allows a broadband internet connection to cover 9 miles, while navigating the physical terrain that at times can make wireless broadband connectivity difficult. Because of this range, these internet connections are extremely cost-effective requiring minimal infrastructure investments, and are far more dependable than the limited connections that many rural areas currently have.

In its Unlicensed Operations in the TV Band proceeding, the FCC adopted rules enabling devices to operate on channel 37 (608-614 MHz) as well as in the so-called "duplex gap" (652-663 MHz) created by the Incentive Auction. The FCC should maintain these rules as it reviews petitions for reconsideration. And in its "Vacant Channel" proceeding, we request that the Commission finalize its proposal and preserve a vacant channel in each market in the post-auction broadcast TV band (54-608 MHz). These steps will ensure that three useable TV channels remain available in every market around the country.

Robust low-cost broadband connections literally connect rural communities to the rest of the world. They allow students to connect to their school networks from home, or use online resources for homework and other projects. Farmers could use cloud computing and analytics software to better grow and monitor their crops, reduce waste, save water, optimize fertilization and maximize yields. Doctors in rural health clinics would be able to access life-saving information through broadband connected networks with urban medical centers. Law-enforcement would be able to quickly dispatch officers and relay arrest-warrant information during emergencies. Families could not only share pictures and stay in touch with each other, but also access a wealth of economic opportunities to which they would otherwise not have access.

In short, broadband internet access will help close the opportunity gap between Americans in rural communities and Americans in urban centers. We believe the TV white spaces hold great promise toward closing that gap quickly and affordably.

Thank you for your consideration of our request.

OFFICE OF
THE CHAIRMAN

FEDERAL COMMUNICATIONS COMMISSION
WASHINGTON

October 24, 2017

The Honorable Alma Adams
U.S. House of Representatives
222 Cannon House Office Building
Washington, D.C. 20515

Dear Congresswoman Adams:

Thank you for your letter concerning the importance of ensuring that rural communities can enjoy access to services and opportunities enabled by broadband Internet. As you know, I have long been a proponent of Commission actions and policies to benefit rural communities, and believe that we must continue to find ways to ensure that these and other underserved communities are connected to digital opportunity. High-speed broadband Internet access is critical to economic opportunity, job creation, and civic engagement.

A top priority of mine is to close the digital divide between those that have access to cutting-edge communications services and those that do not. Every American who wants to participate in the digital economy should be able to do so. I believe that unlicensed spectrum, both in the TV bands and in other frequency bands, can and will play an important role in providing broadband services to rural areas. Wireless Internet Service Providers (WISPs) have been making great use of unlicensed spectrum, particularly in the 2.4 GHz and 5 GHz "Wi-Fi" bands, to serve many rural areas. WISPs also now are providing service using spectrum in the 3.6 GHz band. The Commission is also moving forward quickly to enable 5G services, which would make use of high-band spectrum, including unlicensed spectrum, to provide innovative millimeter-wave services that can be used to serve rural communities.

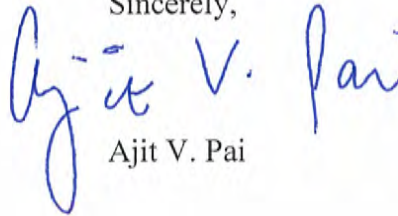

With regard to making sufficient unlicensed spectrum available in the TV bands, the Commission developed regulations several years ago to allow for the provision of broadband services on an unlicensed basis on unassigned channels, known as "white spaces," in the TV bands. In 2015, I supported revisions to the TV white space rules to better provide for deployments in rural areas by allowing for higher power to transmit service over longer distances. As you point out, the low band frequencies in the TV bands offer excellent signal propagation that is particularly helpful in serving rural communities. The Commission is currently evaluating petitions for reconsideration of certain technical rules established in that proceeding, including the rules for unlicensed operations in the TV bands and on channel 37.

Following the repacking of the TV bands to clear the 600 MHz spectrum made available nationwide for mobile broadband services in the incentive auction, sufficient TV white spaces spectrum should continue to be available for unlicensed use in rural areas, and when combined with the spectrum in the 600 MHz duplex gap, will be available to help provide broadband service to communities. In some urban areas, however, there will be fewer white space channels

available following repacking, and the Commission will need to balance wider deployment of white space services with the needs of low power TV stations and translators that are being displaced by the incentive auction. This is all the more reason why I will work to promote a variety of different ways of providing for the availability of unlicensed spectrum in the TV bands and other bands that will help this nation close the digital divide.

I appreciate your interest in this matter. Please let me know if I can be of any further assistance.

Sincerely,

A handwritten signature in blue ink that reads "Ajit V. Pai". The signature is stylized, with the first name "Ajit" written in a cursive-like font, followed by "V." and "Pai".

As you point out, the low band frequencies in the TV bands offer excellent signal propagation that is particularly helpful in serving rural communities. The Commission is currently evaluating petitions for reconsideration of certain technical rules established in that proceeding, including the rules for unlicensed operations in the TV bands and on channel 37.

Following the repacking of the TV bands to clear the 600 MHz spectrum made available nationwide for mobile broadband services in the incentive auction, sufficient TV white spaces spectrum should continue to be available for unlicensed use in rural areas, and when combined with the spectrum in the 600 MHz duplex gap, will be available to help provide broadband service to communities. In some urban areas, however, there will be fewer white space channels

available following repacking, and the Commission will need to balance wider deployment of white space services with the needs of low power TV stations and translators that are being displaced by the incentive auction. This is all the more reason why I will work to promote a variety of different ways of providing for the availability of unlicensed spectrum in the TV bands and other bands that will help this nation close the digital divide.

I appreciate your interest in this matter. Please let me know if I can be of any further assistance.

Sincerely,

A handwritten signature in blue ink that reads "Ajit V. Pai". The signature is fluid and cursive, with the first name "Ajit" being the most prominent part.

OFFICE OF
THE CHAIRMAN

FEDERAL COMMUNICATIONS COMMISSION
WASHINGTON

October 24, 2017

The Honorable Jeff Duncan
U.S. House of Representatives
2229 Rayburn House Office Building
Washington, D.C. 20515

Dear Congressman Duncan:

Thank you for your letter concerning the importance of ensuring that rural communities can enjoy access to services and opportunities enabled by broadband Internet. As you know, I have long been a proponent of Commission actions and policies to benefit rural communities, and believe that we must continue to find ways to ensure that these and other underserved communities are connected to digital opportunity. High-speed broadband Internet access is critical to economic opportunity, job creation, and civic engagement.

A top priority of mine is to close the digital divide between those that have access to cutting-edge communications services and those that do not. Every American who wants to participate in the digital economy should be able to do so. I believe that unlicensed spectrum, both in the TV bands and in other frequency bands, can and will play an important role in providing broadband services to rural areas. Wireless Internet Service Providers (WISPs) have been making great use of unlicensed spectrum, particularly in the 2.4 GHz and 5 GHz "Wi-Fi" bands, to serve many rural areas. WISPs also now are providing service using spectrum in the 3.6 GHz band. The Commission is also moving forward quickly to enable 5G services, which would make use of high-band spectrum, including unlicensed spectrum, to provide innovative millimeter-wave services that can be used to serve rural communities.

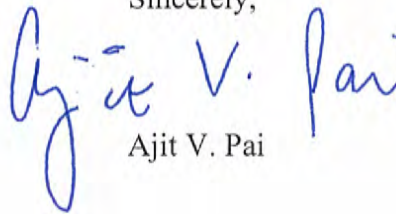

With regard to making sufficient unlicensed spectrum available in the TV bands, the Commission developed regulations several years ago to allow for the provision of broadband services on an unlicensed basis on unassigned channels, known as "white spaces," in the TV bands. In 2015, I supported revisions to the TV white space rules to better provide for deployments in rural areas by allowing for higher power to transmit service over longer distances. As you point out, the low band frequencies in the TV bands offer excellent signal propagation that is particularly helpful in serving rural communities. The Commission is currently evaluating petitions for reconsideration of certain technical rules established in that proceeding, including the rules for unlicensed operations in the TV bands and on channel 37.

Following the repacking of the TV bands to clear the 600 MHz spectrum made available nationwide for mobile broadband services in the incentive auction, sufficient TV white spaces spectrum should continue to be available for unlicensed use in rural areas, and when combined with the spectrum in the 600 MHz duplex gap, will be available to help provide broadband service to communities. In some urban areas, however, there will be fewer white space channels

available following repacking, and the Commission will need to balance wider deployment of white space services with the needs of low power TV stations and translators that are being displaced by the incentive auction. This is all the more reason why I will work to promote a variety of different ways of providing for the availability of unlicensed spectrum in the TV bands and other bands that will help this nation close the digital divide.

I appreciate your interest in this matter. Please let me know if I can be of any further assistance.

As you know, I have long been a proponent of Commission actions and policies to benefit rural communities, and believe that we must continue to find ways to ensure that these and other underserved communities are connected to digital opportunity. High-speed broadband Internet access is critical to economic opportunity, job creation, and civic engagement.

A top priority of mine is to close the digital divide between those that have access to cutting-edge communications services and those that do not. Every American who wants to participate in the digital economy should be able to do so. I believe that unlicensed spectrum, both in the TV bands and in other frequency bands, can and will play an important role in providing broadband services to rural areas. Wireless Internet Service Providers (WISPs) have been making great use of unlicensed spectrum, particularly in the 2.4 GHz and 5 GHz "Wi-Fi" bands, to serve many rural areas. WISPs also now are providing service using spectrum in the 3.6 GHz band. The Commission is also moving forward quickly to enable 5G services, which would make use of high-band spectrum, including unlicensed spectrum, to provide innovative millimeter-wave services that can be used to serve rural communities.

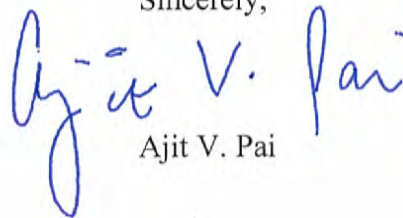

With regard to making sufficient unlicensed spectrum available in the TV bands, the Commission developed regulations several years ago to allow for the provision of broadband services on an unlicensed basis on unassigned channels, known as "white spaces," in the TV bands. In 2015, I supported revisions to the TV white space rules to better provide for deployments in rural areas by allowing for higher power to transmit service over longer distances. As you point out, the low band frequencies in the TV bands offer excellent signal propagation that is particularly helpful in serving rural communities. The Commission is currently evaluating petitions for reconsideration of certain technical rules established in that proceeding, including the rules for unlicensed operations in the TV bands and on channel 37.

Following the repacking of the TV bands to clear the 600 MHz spectrum made available nationwide for mobile broadband services in the incentive auction, sufficient TV white spaces spectrum should continue to be available for unlicensed use in rural areas, and when combined with the spectrum in the 600 MHz duplex gap, will be available to help provide broadband service to communities. In some urban areas, however, there will be fewer white space channels

available following repacking, and the Commission will need to balance wider deployment of white space services with the needs of low power TV stations and translators that are being displaced by the incentive auction. This is all the more reason why I will work to promote a variety of different ways of providing for the availability of unlicensed spectrum in the TV bands and other bands that will help this nation close the digital divide.

I appreciate your interest in this matter. Please let me know if I can be of any further assistance.

Sincerely,

A handwritten signature in blue ink that reads "Ajit V. Pai". The signature is stylized, with the first name "Ajit" written in a cursive-like script, followed by a hyphen and "V.", and then the last name "Pai" in a more upright, cursive style.

The Commission is currently evaluating petitions for reconsideration of certain technical rules established in that proceeding, including the rules for unlicensed operations in the TV bands and on channel 37.

Following the repacking of the TV bands to clear the 600 MHz spectrum made available nationwide for mobile broadband services in the incentive auction, sufficient TV white spaces spectrum should continue to be available for unlicensed use in rural areas, and when combined with the spectrum in the 600 MHz duplex gap, will be available to help provide broadband service to communities. In some urban areas, however, there will be fewer white space channels

available following repacking, and the Commission will need to balance wider deployment of white space services with the needs of low power TV stations and translators that are being displaced by the incentive auction. This is all the more reason why I will work to promote a variety of different ways of providing for the availability of unlicensed spectrum in the TV bands and other bands that will help this nation close the digital divide.

I appreciate your interest in this matter. Please let me know if I can be of any further assistance.

Sincerely,

A handwritten signature in blue ink that reads "Ajit V. Pai". The signature is fluid and cursive, with the first name "Ajit" being the most prominent part.

OFFICE OF
THE CHAIRMAN

FEDERAL COMMUNICATIONS COMMISSION
WASHINGTON

October 24, 2017

The Honorable Tom Marino
U.S. House of Representatives
2242 Rayburn House Office Building
Washington, D.C. 20515

Dear Congressman Marino:

Thank you for your letter concerning the importance of ensuring that rural communities can enjoy access to services and opportunities enabled by broadband Internet. As you know, I have long been a proponent of Commission actions and policies to benefit rural communities, and believe that we must continue to find ways to ensure that these and other underserved communities are connected to digital opportunity. High-speed broadband Internet access is critical to economic opportunity, job creation, and civic engagement.

A top priority of mine is to close the digital divide between those that have access to cutting-edge communications services and those that do not. Every American who wants to participate in the digital economy should be able to do so. I believe that unlicensed spectrum, both in the TV bands and in other frequency bands, can and will play an important role in providing broadband services to rural areas. Wireless Internet Service Providers (WISPs) have been making great use of unlicensed spectrum, particularly in the 2.4 GHz and 5 GHz "Wi-Fi" bands, to serve many rural areas. WISPs also now are providing service using spectrum in the 3.6 GHz band. The Commission is also moving forward quickly to enable 5G services, which would make use of high-band spectrum, including unlicensed spectrum, to provide innovative millimeter-wave services that can be used to serve rural communities.

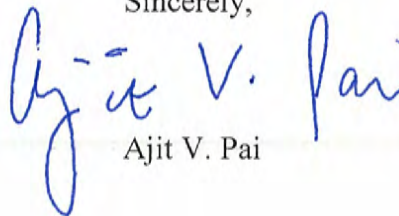

With regard to making sufficient unlicensed spectrum available in the TV bands, the Commission developed regulations several years ago to allow for the provision of broadband services on an unlicensed basis on unassigned channels, known as "white spaces," in the TV bands. In 2015, I supported revisions to the TV white space rules to better provide for deployments in rural areas by allowing for higher power to transmit service over longer distances. As you point out, the low band frequencies in the TV bands offer excellent signal propagation that is particularly helpful in serving rural communities. The Commission is currently evaluating petitions for reconsideration of certain technical rules established in that proceeding, including the rules for unlicensed operations in the TV bands and on channel 37.

Following the repacking of the TV bands to clear the 600 MHz spectrum made available nationwide for mobile broadband services in the incentive auction, sufficient TV white spaces spectrum should continue to be available for unlicensed use in rural areas, and when combined with the spectrum in the 600 MHz duplex gap, will be available to help provide broadband service to communities. In some urban areas, however, there will be fewer white space channels

available following repacking, and the Commission will need to balance wider deployment of white space services with the needs of low power TV stations and translators that are being displaced by the incentive auction. Thank you for your letter concerning the importance of ensuring that rural communities can enjoy access to services and opportunities enabled by broadband Internet. As you know, I have long been a proponent of Commission actions and policies to benefit rural communities, and believe that we must continue to find ways to ensure that these and other underserved communities are connected to digital opportunity. High-speed broadband Internet access is critical to economic opportunity, job creation, and civic engagement.

A top priority of mine is to close the digital divide between those that have access to cutting-edge communications services and those that do not. Every American who wants to participate in the digital economy should be able to do so. I believe that unlicensed spectrum, both in the TV bands and in other frequency bands, can and will play an important role in providing broadband services to rural areas. Wireless Internet Service Providers (WISPs) have been making great use of unlicensed spectrum, particularly in the 2.4 GHz and 5 GHz "Wi-Fi" bands, to serve many rural areas. WISPs also now are providing service using spectrum in the 3.6 GHz band. The Commission is also moving forward quickly to enable 5G services, which would make use of high-band spectrum, including unlicensed spectrum, to provide innovative millimeter-wave services that can be used to serve rural communities.

With regard to making sufficient unlicensed spectrum available in the TV bands, the Commission developed regulations several years ago to allow for the provision of broadband services on an unlicensed basis on unassigned channels, known as "white spaces," in the TV bands. In 2015, I supported revisions to the TV white space rules to better provide for deployments in rural areas by allowing for higher power to transmit service over longer distances. As you point out, the low band frequencies in the TV bands offer excellent signal propagation that is particularly helpful in serving rural communities. The Commission is currently evaluating petitions for reconsideration of certain technical rules established in that proceeding, including the rules for unlicensed operations in the TV bands and on channel 37.

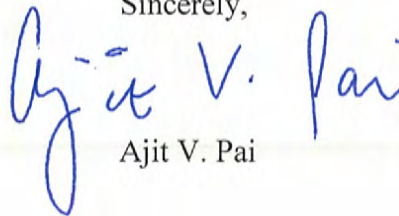

Following the repacking of the TV bands to clear the 600 MHz spectrum made available nationwide for mobile broadband services in the incentive auction, sufficient TV white spaces spectrum should continue to be available for unlicensed use in rural areas, and when combined with the spectrum in the 600 MHz duplex gap, will be available to help provide broadband service to communities. In some urban areas, however, there will be fewer white space channels

available following repacking, and the Commission will need to balance wider deployment of white space services with the needs of low power TV stations and translators that are being displaced by the incentive auction. This is all the more reason why I will work to promote a variety of different ways of providing for the availability of unlicensed spectrum in the TV bands and other bands that will help this nation close the digital divide.

I appreciate your interest in this matter. Please let me know if I can be of any further assistance.

Sincerely,
